Abstract	In 2019,it is estimated that there are 613,000 middle-aged hikikomori people in Japan. In this study, we attempted to verify the factors of life difficulties of middle-aged hikikomori through quantitative text analysis of newspaper articles. From the viewpoint of the previous research, "isolation," "living problems," and "vicious situation" were set as the factor hypotheses of life difficulty. Quantitative text analysis was performed on 270 newspaper articles with "hikikomori" and "parties" as search words, and a chi-square test and residual analysis were performed for factor hypotheses and cross-tabulation of age groups. As a result, "living problems" were significant in the 2005-2009 group, 2010-2014 group, and 2015-2019 group, and considered a "vicious circle" in the 2010-2014 group and 2015-2019 group. The appearance rate was high. Two factors, "living problems" and "vicious situation," were confirmed as verification of the difficulty factors of life in middle-aged hikikomori people. It was suggested that they are responding strongly to the difficulties of life.
keyword	Middle-aged hikikomori, difficulties of life, newspaper articles, quantitative text analysis
