Abstract	<p>This is a report of psychological education that writers conducted it in an elementary school. We did this program for all children of an elementary school. And, teachers participated there, too. ① Squiggle is done in a pair. ② 6 people do story making using all works by a group. ③ Children announce a story. We analyzed the work of children, the impressions of children and teachers, the state of activities, and examined the significance of using drawing method for psychological education. We examined the effect of the psychological education of the teacher participation type. The feature of this program is handling images and including play elements. Its features have stimulated the child's internal energy and encouraged expressions of thought and feelings abundantly. In addition, teachers experienced a receptive manner, and it was connected for the making of base of the education consultation system because the teacher participated in the program.</p>
keyword	squiggle psychological education clinical psychologist
