Abstract	<p>The goal of this study is to analyze and reveal the attitudes of members of comprehensive community sports clubs toward adaptive sports.</p> <p>To achieve this, a comparative analysis was conducted in four clubs, using the results of a questionnaire administered to 150 members from each of the clubs (i.e., 600 members in total), of which only two had adaptive sports programs. The following primary results were observed.</p> <p>Members of clubs without adaptive sports tended to have a positive opinion toward such programs. This is inferred due to differences in judgment criteria between the two groups, thus affecting the results. There are those who believe that adaptive sports—the main event of which is the Paralympics as showcased in the media—are akin to general sports, while others, who have seen the actual performance of para-athletes in their clubs, believe that adaptive sports, let alone the Paralympics, are incomparable to general sports.</p> <p>As feelings of inclusiveness tended to be higher among members of clubs with adaptive sports, such programs may be a contributive factor in the realization of an inclusive society, as they encourage and propagate understanding of the features of comprehensive community sports clubs, which are purported to function as a local community.</p>
keyword	comprehensive community sports clubs, adaptive sports, sense of belonging, inclusive society
