Affiliation	Shinjuen Ryouyoujo Hospital; Faculty of Humanities, Nagasaki Junshin Catholic University
Abstract	<p style="text-align: center;">This study of two children with autism spectrum disorder was carried out over three months of daytime fieldwork in a disability support service. The purpose was to ascertain the improvement if any of four developmental effect: suitability in interacting with other children, activity, skills, and rule understanding. The results showed that activity and skills were improved interactively but any improvement in suitability in interacting with other children and rule understanding could not be clearly confirmed.</p>
keyword	child with autism spectrum disorder. leisure-time support, field work
