Abstract	<p>A total of 197 individuals who worked at a new building with a newly opened restaurant in 2017 were surveyed. Participants were asked regarding their lunch preferences, perception of a healthy diet, and factors that affected their decision in selecting food during lunch time. Results showed that they spent approximately 500 yen per lunch, and the main factors that influenced their choice of food were the delectable taste and price. Moreover, they described that a “healthy diet” is comparable to eating “adequate amount of vegetables,” “low calorie intake,” and a “balanced diet.” The most common foods they consumed during lunch were Washoku and noodles. Many of the participants thought that anti-metabolic syndrome, antihypertensive, or diabetic diets can be sold at restaurants and possibly in that new restaurant.</p>
keyword	food environment, new restaurant, healthy diet, attitudes regarding lunch
