Title	A Study on the Teaching Materials of Childcare Contents “Environment” — Efforts in “Study of Graduation Subject” with the Theme of Shining Mud Dumplings —
Author	Yoshio HARUHARA
Affiliation	Department of Early Childhood Education and Care, Nishikyushu University Junior Collage
Abstract	This paper reports on the contents and results of the mud dumpling research that has been continuously developed in the "Study of graduation subject" since 2019. The main contents of the report are 1) the educational meaning of making mud dumplings and 2) the development of a method for making shiny mud dumplings (teaching material research). It has been clarified that making mud dumplings is a play that encourages understanding of the nature of substances, the development of thinking ability, and various sensibilities, and is a teaching material that guarantees a learning experience suitable for early childhood children. After that, we clarified the production process and the points of the shiny mud dumplings made of soil and that made of plaster.
keyword	the contents of child care (environment) teaching materials study mud dumplings study of graduation subject
