Abstract	It is well known that the computer system security is composed of a balance by the reliabilith and cost and service. In the past, the operation failure has occurred by computer viruses and cracker, etc.. in this Univ. These problems originate for several things on the computer network system. As a method of solving these problems techinically, we mention a FireWall and DMZ etc. However, Some of the most important things are the organization that manages the information system and Scurity Policy. Especially Security Polycy is strangly required to the university thaa is a scientific reserch organization. In this paper, we show the present information processing system of Nishikyushu University, Futhermore, we propose the informantion security required in the future.
keyword	Information security,Security Policy
