Title	Characteristics of Family and Regional Factors of Hikikomori in Middle-aged and Older adults : Examination Based on the Attribute Comparison of Supporters by Questionnaire survey
Author	Youichi Yakabe
Affiliation	Nishikyushu Junior College Department of Early Childhood Education and Care
Abstract	<p>The purpose of this study is to examine the family and regional factors of hikikomori through a questionnaire survey of workers who are mainly involved in hikikomori support in middle-aged and older adults. A one-way ANOVA of variance and multiple comparison test were performed to attempt a statistical comparison by supporter attributes.</p> <p>A t-test was conducted to compare the supporter's institution, occupation, and qualifications. As a result, two questions were significant at the support organizations for the independence of the needy. The life counselors were significant in two questions. Social workers were significant in two questions. In addition, we conducted a one-way ANOVA of variance for the number of years of professional experience, the number of years in charge of incumbents, and the number of hikikomori cases. As a result, the number of years of professional experience was significant for one question. The number of years in charge of incumbent was significant with six question items.</p>
