Title	An Approach Using Word Association Tests for Urgent Issues in Clinical Psychology Practice within Schools: Empirical study and case studies of junior high school students
Author	Chikara AKAGAWA
Affiliation	
Abstract	<p>This is an empirical and clinical study that aims to understand junior high school students within the context of junior high school clinical psychology practice using word association tests and to promote self-understanding and psychological growth.</p> <p>Part 1: The section on the study topic and objectives provides an overview of prior studies covering junior high school students.</p> <p>Part 2: In the empirical and clinical study, a statistical and quantitative investigation is conducted on the characteristics of word association tests with general junior high school students, those with a record of ongoing school absence, and those with developmental disorders by examining case studies using the word association tests.</p> <p>Part 3: The discussion section presents challenges and perspectives for the future alongside a general discussion.</p>
