Abstract	<p>Various environmental problems has been occurring everywhere in the world. “Sustainable De- velopment” was proposed to solve these environmental problems. In addition, “Education for Sustain- able Development (ESD)” was proposed to develop human resources which creating a sustainable soci- ety. Hence, the importance of ESD has been growing. Environmental Education plays an important role in ESD. Environmental Education is provided from infancy to high school in Japan. This paper re- ports that “Water” was as a method for Environment education in infancy. Water is familiar to our life. Moreover, the Water has many scientific features. It is seemed that using the Water to teach science enhances students’ understanding of Science Education and Environmental Education. keyword Typhoon, Science Education, Environmental Educatio</p>
keyword	ESD, Environmental Education, Water, Infancy
