Abstract	<p>This is a Japanese translation of Pete Alcock's 'The Influence of Dynamic Perspectives on Poverty Analysis and Anti-Poverty Policy in the UK', Journal of Social Policy, 33(3), 395-416, 2004. The original article provides an overview of the academic debates and recent research on the dynamic perspective on poverty and anti-poverty policy. Renewed theoretical interest in dynamic analysis is discussed in the context of the more general debate about the role of structure and agency in social relations. This is followed by a brief outline of some of new empirical datasets now available for longitudinal research, in particular in the UK. The implications of dynamic analysis for our understanding of poverty are summarized, followed by a discussion of the impact of this on anti-poverty policy, again drawing largely on the UK, and some specifically English, developments. The article concludes that dynamic analysis and the role of agency has had a significant impact on both academic debate and policy intervention on poverty, but that this should not be interpreted as leading to an abandonment of policies for structural reform aimed at redistributing resources to the poor.</p>
keyword	Poverty Analysis, Dynamic Perspectives, Anti-Poverty Policy
