Abstract	<p>The purpose of this study is to clarify the mechanism of vicious mechanism due to hikikomori in middle-aged and older adults .The subjects of the survey were randomly selected supporters belonging to 329 support organizations for the independence of the needy and 75 local support centers for hikikomori. The survey was conducted by mail using self-administered survey questionnaires. The data was analyzed using 138 organizations (34%) and 327 individuals (16%), excluding missing data. As a result of exploratory and confirmatory factor analysis, five factors were extracted: " closed and unstable home," "inadequate social resources," " ignorance of related organizations," "vicious cycle of problems," and " interpersonal maladaptive experiences" In addition, structural equation modeling suggested the relationship between each factor.The fitness of the model : GFI=.0946,AGFI=0.918,CFI=0.922,RMSEA=0.053. It is suggested that vicious circle mechanism based on hikikomori.</p>
