Abstract	<p>In this study, we will consider the possibility of online teaching materials that use specialists other than teachers as guest teachers among these online classes, based on a questionnaire survey of learners. This provided insights into the possibilities of future online teaching materials and future physical education classes. This provided insights into the possibilities of future online teaching materials and future physical education classes. The survey method was a questionnaire survey. The subjects were 88 people who took physical education lectures.</p> <p>It was understood that the results of the questionnaire were "fun" in many cases, giving a favorable impression. Students from the free description had to understand the educational value of online materials. Results and discussions revealed the educational value of online teaching materials in physical education classes. Future issues are about the role of teachers in using online teaching materials.</p>
keyword	Online Teaching materials Pedagogy of Physical Education
