Abstract	The purpose of this study is to clarify the problems of building effective Pre-Entrance Education programmes at Nishikyushu University. This paper is organized as follows. In the introduction, the history and recent development of Pre-Entrance Education in Japan is presented. In the first section, the history and recent development of Pre-Entrance Education in the department of Social Welfare Sciences, Nishikyushu University is reviewed. In the second section, the effect of Pre-Entrance Education in the department of Social Welfare Sciences is analyzed through comparing GPA results over the past seven years. In consideration of the above, we found that the GPA results were getting better over the past seven years, but we cannot clarify that our Pre-Entrance Education program directly has contributed to such improved GPA results. In the third section, we state the problems of building the effective Pre-Entrance Education program. In this section we point out two problems. One is that our Pre-Entrance Education program needs to introduce the elements of remedial education. The other is that our department needs to clarify which subject should be learnt before entering Nishikyushu University to effectively study social welfare sciences there after the entrance.
keyword	pre-entrance education, pre-entrance seminar, pre-entrance assignment, first-year experience, remedial education
