Title	Verifying Correct Response Rate of ChatGPT 4o in the National Nursing Examination
Author	KUZUHARA Seita
Affiliation	Department of Nursing, Faculty of Nursing, NishikyusyuUniversity,
Abstract	<p>The purpose of this study is to verify the correct response rate of ChatGPT 4o in the National Nursing Examination. The results showed that ChatGPT 4o met the passing standard for the National Nursing Examination and showed a certain degree of adaptability to questions re-lated to human psychology, such as conversations with patients. Conversely, the results suggested that calculation-based questions are difficult to improve upon even using the successor model.</p> <p>These findings indicate that areas with high accuracy, such as patient communication and psychological understanding, could be utilized to develop AI-assisted learning drills, while areas with lower accuracy, such as calculation problems, may benefit from complementary teaching materials. This study provides a basis for designing AI-based learning support methods tailored to the individual needs of nursing students and practicing nurses.</p>
keyword	ChatGPT 4o, national nursing examination, correct response rate
