Abstract	In recent years, as the needs for care increase in an aging society, there is a demand for safer and easier methods of care for both the elderly and the caregivers who provide care, and a no-lift policy has been advocated. One of these methods is the use of welfare equipment, and it is thought that the use of welfare equipment will be necessary for caregivers in the future in order to remain involved as caregivers for a long time. We felt that this course was a very valuable experience for the students to acquire the means to be able to engage in caregiving with a healthy body for a long time after graduation and employment. This paper reports on the content of the course and the results of the questionnaire survey.
keyword	Care Expertise Safety and comfort Welfare equipment
