Affiliation	Department of Early Childhood Education and Care, Nishikyushu University Junior College
Abstract	In this study, we examined how pre-admission education that has been implemented relates to first-year education and specialized early childhood education courses. Moreover, we attempted to identify problems in our pre-admission education and specific strategies to improve it in the future. As a future direction, we found that it is important to establish a method to verify whether pre-admission education is smoothly connected to first-year education and professional education.
keyword	pre-admission education
