Title	Factors and Requirements Constituting the Concept of Citizen Guardians : Review of prior research
Author	Keiko Matsushita, Kenji Kuroda
Affiliation	Kansai University
Abstract	<p>This study aimed to sort and analyze the elements and requirements that make up the concept of citizen guardians by reviewing prior research, and consequently, attempt to provide a new definition to the idea of citizen guardians. CiNii returned a total of 158 hits for the search terms "citizen guardian", "social-contributor citizen guardian", and "ward residents' guardian." Excerpts defining citizen guardians were examined in the eleven papers that remained after excluding irrelevant results. In addition to these, I manually selected three cases from adult guardian journals. A total of 14 cases were subject to review, and descriptions of citizen guardians were extracted and examined. This made it possible to classify the factors that constitute the concept of citizen guardians into six categories: candidate's basic information, regionality, training and support for activities by support organizations, type of activity, rights advocacy activities by the citizen, and meaning of remuneration. These six factors were further organized under three requirements: requirements of the individual, requirements of support organizations, and requirements of the activity. From these factors and requirements, a new definition of citizen guardian was formulated as follows: Citizen guardians are people who under training conducted by local governments or agencies entrusted by local governments, acquire necessary skills as guardians, and practice local welfare activities and advocacy activities while receiving continuous support. Regardless of professional qualifications, these activities are not carried out as occupations but as social contributions in the community.</p>
keyword	citizen guardian, definition of citizen guardian, rights advocacy, review
