Abstract	<p>Children's Museum, a community childcare support activity, has been held every year since 2009. This year marked the ninth anniversary of its founding.</p> <p>The activities play a significant role as 'a childcare support center' for children and parents in the community as well as a place of practical learning where students interested in becoming future educators or childcare workers can gain practical learning experience.</p> <p>This study aimed to determine what kind of practical learning the students who participated in the activities obtained. The study was conducted, using questionnaire surveys</p> <p>Results suggested that students who intend to follow a specialized career related to children would receive an extremely valuable education. They will gain '<i>a deepening of their understanding of children</i>', '<i>research experience related to child care and educational perspectives</i>' and also '<i>the development of workplace skills</i>' through their practical learning experience.</p>
keyword	community, childcare support activities , practical learning content analysis, KJ method
