Abstract	<p>We investigated for the patients and students who visited a hospital for treatment there were able to carry out remote expression school member training in the adult nursing science chronicity period that communicated in the remoteness that used Web meeting application (Zoom). We analyzed it using text mining about learning and the contents of the problem report which the student who received practical training in learning and a problem report and the go to the actual place that the student who received practical training in a remote expression school member described described and, in this study, was intended that I clarified whether it was the learning that remote expression school member training brought close to go to the actual place training by extracting common learning in the remote expression school member training and go to the actual place training. As a result, it became clear that the importance of taking the importance of observing a viewpoint and the patient who raised a feeling of self-effect of the patient, a viewpoint to think about the society participation of the patient, the remark contents of the patient and the deep communication was the common learning with the student that it was possible for go to the actual place training</p>
