Abstract	The purpose of this study was to obtain suggestions for changes in the image of elderly people with dementia associated with promotion. For occupational therapy students, the evaluation SD score, activity / competence SD score, and total SD score were compared by grade. As a result, in the evaluation SD score and SD total score, the score of the third grader tended to be higher or higher than that of the first grader and the second grader, and the image of the elderly with dementia may change positively with the promotion. It was suggested.
keyword	Elderly people with Dementia,image,Occupational therapy student
