Title	The Development of a Learning Support System to Improve New Nurses' Clinical Judgements
Author	Okazaki Michiko
Affiliation	Nishikyushu University, Faculty of Nursing Science
Abstract	<p>The purpose of this research was to develop a learning support system to improve new nurses' clinical judgments and the quality of nursing care. In order to find out the learning environment of new nurses, 14 expert nurses from 6 university and general hospitals were asked to provide cases about the nursing process in their medical institutions.</p> <p>After examining the 27 cases collected from the expert nurses in line with the model case prepared by the research collaborators, we developed a "learning support system" software, applying Steinaker and Bell's Taxonomy of Experiential Learning (1979). The software has 5 steps; 1) lecture on nursing process; 2) the model case on nursing process; 3) 27 sample cases on nursing process; 4) evaluation system, which enables learners to do self-evaluation of their nursing process and to identify areas for improvement and 5) system to utilize learners' clinical cases in each step of the nursing process.</p> <p>The following issues remain to be dealt with; 1) further development of the "learning support system" software; 2) trials of the software and 3) verification of the software and the system.</p>
keyword	Learning Support System, Clinical Judgements, New Nurses
