研究業績 英文表記

perspective that nursing freshmen express verbally and in written form in order to gain insight on educational support to bring out their thoughts and feelings. [Method]We asked 17nursing freshmen to conduct discussion on a theme similar to tasks on nursing perspective in clinical practice record and compared it with content extracted from their discussion. We then conducted word frequency analysis, attention analysis, and word network analysis using Text Mining Studio(Ver4.2). [Results]Nursing basics were described for clinical practice records and the importance of the grounds of nursing technique and the judgment was spoken based on an experience of student freshmen in discussion. It was clinical practice record that leaning in the clinical practice was expressed succinctly while it was the discussion that each student's thought and experience were expressed fully. [Discussion]Our analysis revealed that teachers were required to make each student's experience a teaching material without rushing into verbalizing it. It is therefore necessary for them to help students become accustomed to verbalizing their own thoughts and feelings.	和文
