Title	Development and problems of Living together-type care in Saga prefecture: From interviews of "Saga prefecture's community living together station"
Author	Toshiko KATO
Affiliation	Department of Social Welfare Sciences, Faculty of Health and Social Welfare Sciences
Abstract	<p>[Purpose] The purpose of this research is to discuss the present situation and problems of coexistence-type care from the approach of "Saga prefecture's community coexistence station."</p> <p>[Method] Interviews were conducted at nine institutions and qualitative data analysis (Steps for Coding Theorization (SCAT)) was conducted based on the categories of "initially-established-type," "developed-type," and "newly-established-type."</p> <p>[Results] Concepts were formed, such as "perception of community life" for the initially-established-type, "daily living needs in community life" for the developed-type, and "development and problems according to needs and characteristics of community" for the newly-established-type. Mutual relations among the nine formed concepts were arranged around a new concept named, "Being a cornerstone of care based on the needs of community life", introducing a focus on the promotion of coexistence-type care.</p>
keyword	Coexistence-type care; Saga prefecture's community coexistence station; Takurosho (day service for the elderly at a private house)
